

Product information ARTEMISIA SHOT PET

Artemisia Shot PET contains Artemisia powder from hand-picked and gently dried Artemisia leaves from Swiss cultivation.

20 sticks with Artemisia leaf powder in granule form. The individual granules are coated with a slightly sweetening coating (sucralose).

Our Artemisia plants are a special breed from Swiss cultivation. They are grown and processed by hand. We use only the dried leaf tips without stems.

How does Artemisia work?

Artemisia contains a substance which, on contact with iron ions (which are found in certain cells, for example), breaks down into two aggressive components which rapidly kill unwanted cells or germs (e.g. bacteria, plasmodia, etc.) in the vicinity.

Advantages of Artemisia Shot PET

- Very easy dosage (granules)
- Lightly sweetened coating (sucralose) for easier swallowing (no bitter taste).
- Practical sticks, e.g. for on the go.
- We use only the dried leaf tips and no stems, woody parts, etc.
- Special breeding with high content of physiologically interesting plant substances.

Feeding recommendation

Distributed throughout the day
Animals up to 20 kg: 1 stick per day
Animals up to 40 kg: 2 sticks per day
Animals over 60 kg: 3 sticks per day
